

Project Design Phase
Proposed Solution Template

Date	15 February 2026
Team ID	LTVIP2026TMIDS60338
Project Name	Full Stack Development (MERN)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students and self-learners struggle to find structured, reliable learning resources and maintain consistency in their learning journey. Most content is scattered across multiple platforms, and there is no centralized system to guide users with a clear roadmap and track their progress effectively.
2.	Idea / Solution description	LernHub is a full-stack MERN-based web application that provides a centralized platform for learners to discover structured courses, follow guided learning paths, and track their progress. It includes features like course enrollment, personalized dashboards, progress tracking, and recommendations to help users stay consistent and organized in their learning journey.
3.	Novelty / Uniqueness	Unlike existing platforms, LernHub focuses on combining structured roadmaps, progress tracking, and personalized recommendations in a single platform. It emphasizes simplicity and beginner-friendly design, making it easier for students to understand what to learn next instead of getting overwhelmed by too many resources.
4.	Social Impact / Customer Satisfaction	LernHub helps students, especially beginners, reduce confusion and improve learning efficiency. It supports skill development, which directly improves employability. By providing clarity and guidance, it reduces stress and increases motivation among learners.
5.	Business Model (Revenue Model)	Freemium model: basic courses and features are free, while advanced courses, certifications, and premium features (like personalized learning paths) are paid. Additional revenue can be generated through partnerships, ads, or sponsored courses.

6.	Scalability of the Solution	The MERN stack allows the application to scale efficiently with increasing users. Cloud deployment (AWS/Render) and database optimization (MongoDB) enable handling large amounts of user data, courses, and traffic without performance issues.
